ABOUT US

Where Industry Meets the Classroom

A 501(c)(3) corporation, the Construction Industry Education Foundation (CIEF) develops construction, design, and trade professionals through educational endeavors, mentoring initiatives, and training activities. CIEF programs are provided free of charge to students thanks to the generosity of industry sponsors and philanthropic support.

CIEF's signature program is the Design Build Competition®. Held in the Spring semester, student teams are challenged to design and prepare construction documents according to criteria outlined by CIEF and build their structure during a two-day competition. Participating student teams are judged on the completion of design, plan review, safety, teamwork, and craftsmanship.

Visit www.cie.foundation for more information about CIEF Programs and Events.

CHAPTER REQUIREMENTS

Each Board of Directors of individual chapters will meet a minimum of six times per year (every other month). Each Board may also determine the best local committee structure to empower members of the industry to join in the mission.

Each Chapter must host a minimum of two events in the fiscal year, one student facing (workforce development) and one industry facing (philanthropic and recruitment oriented).

Each Chapter must commit to raising a minimum of \$5,000 for built environment career-oriented scholarships (trades school, apprenticeship programs, and two-year and four-year universities).

Each member of the Board of Directors is expected to be a philanthropic supporter of their Chapter.
